PARALLEL COMPUTING

Summer Semester 2019

Armin Biere Wolfgang Schreiner

Institute for Formal Models and Verification (FMV)
Research Institute for Symbolic Computation (RISC)

JOHANNES KEPLER
UNIVERSITY LINZ

Topics

Application of concurrency to speed-up computations.

- Multi-core processors, multi-processor systems, computer clusters, computational grids.
- Shared memory (multi-threaded) and distributed memory (message passing) programming.
- Task parallel and data parallel algorithms.
- Strategies for parallel program design.
- Performance measures and complexity models.
- Performance analysis and debugging.

Various interrelated aspects (many of which we will discuss).

Preliminary Schedule

- March 5 (Schreiner): Parallel Architectures and Performance.
- March 12 (Biere): Parallel Algorithms and Complexity.
- March 26 (Schreiner): Java Multithreading and OpenMP.
- April 2 (Biere): Low-Level Shared Memory Programming.
- April 9 (Schreiner): Designing Parallel Programs.
- April 30 (Biere): Low-Level Shared Memory Programming.
- May 7 (Schreiner): Presentations of Solutions 1.
- May 14 (Biere): Low-Level Shared Memory Programming.
- May 21 (Biere): Presentations of Solutions 2.
- May 28 (Schreiner): Message Passing Programming with MPI.
- June 18 (Biere): Presentations of Solutions 3.
- June 25 (Schreiner): Presentation of Solutions 4.

Individual meetings for discussing the assignments.

Organization and Grades

- Moodle Course
  - Materials and links.
  - Forums for announcements and Q&A.
  - Submission of assignments.
- Assignments
  - 4 programming assignments will be handed out.
  - At least 3 have to be turned in and graded positively.
  - Elaboration individually or in groups of twos.
  - Selected submissions will be invited for presentation.

No exam, grade will be entirely based on assignments/presentations.
