Part 1: Symbolic summation (a short introduction)

Part 2: Modeling of sequences with a term algebra (user interface)

Part 3: Modeling of sequences in difference rings (computer algebra)

Part 4: Construction of appropriate difference rings (advanced CA)

Part 5: Applications

We start with the following telescoping problem:

Given an expression $f(k)$ that evaluates to a sequence.

Find an expression $g(k)$ such that the telescoping equation holds:

$$f(k) = g(k+1) - g(k) \quad (1)$$

Suppose we find such an expression $g(k)$. Then we proceed as follows.

Summing (1) over k from a to b (and assuming that no poles arise during the evaluation) yields

$$\sum_{k=a}^b f(k) = g(b+1) - g(a). \quad (2)$$

Note: we could always choose

$$g(k) = \sum_{i=a}^{k-1} f(i) \quad (3)$$

which would turn (2) to the trivial identity $\sum_{k=a}^b f(k) = \sum_{k=a}^b f(k)$.

Thus we should refine our problem from above:

Find an expression $g(k)$ with (1) where $g(k)$ is simpler than the trivial solution (3).

Indefinite summation of polynomials

We start with one of the most simplest cases: the summand is a polynomial, i.e., $f(x) \in \mathbb{K}[x]$.

The following questions arise:

1. What is the domain of expressions in which we search $g(k)$?
2. How can we calculate a solution $g(k)$ in this solution domain?

As it turns out, the first question can be answered nicely: a solution $g(x)$ exists always in $\mathbb{K}[x]$. For the second question, we will consider two different tactics that are often used in summation packages.

Tactic 1: the classical approach

Note that for indefinite integration of polynomials one can utilize the following well known property: for any $m \in \mathbb{N}$ we have

$$D_x x^m = m x^{m-1}$$

which implies

$$\int_a^b x^m dx = \frac{x^{m+1}}{m+1} \Big|_a^b = \frac{b^{m+1} - a^{m+1}}{m+1}.$$

Thus by linearity we can integrate any polynomial by

$$\int_a^b \sum_{m=0}^d c_m x^m dx = \sum_{m=0}^d c_m \int_a^b x^m dx = \sum_{m=0}^d \frac{c_m (b^{m+1} - a^{m+1})}{m+1}.$$

For indefinite summation of polynomials we can follow precisely the same classical strategy.

Definition. For any sequence (expression) $g(k)$ we define

$$\Delta g(k) := g(k+1) - g(k).$$

Lemma

For $m \in \mathbb{N}$ we have

$$\boxed{\Delta x^m = m x^{m-1}}.$$

Proof.

We have

$$\begin{aligned}\Delta x^m &= (x+1)^m - x^m \\ &= (x+1)x(x-1)\dots(x-m+2) - x(x-1)\dots(x-m+1) \\ &= ((x+1) - (x-m+1))x(x-1)\dots(x-m+2) \\ &= m x^{m-1}.\end{aligned}$$

As a consequence we get

$$\Delta \frac{x^{m+1}}{m+1} = x^m, \quad m \in \mathbb{N}$$

and summing this equation over k from a to b yields

$$\sum_{x=a}^b x^m = \frac{(b+1)^{m+1} - a^{m+1}}{m+1}.$$

Note that this is nothing else than the continuous version for integration. In particular, for given

$$f(x) = \sum_{m=0}^d c_m x^m \in \mathbb{K}[x]$$

with $d \in \mathbb{N}$ it follows that

$$g(x) = \sum_{m=0}^d \frac{c_m x^{m+1}}{m+1}$$

is a telescoping solution. Furthermore,

$$\sum_{x=a}^b f(x) = \sum_{m=0}^d c_m \sum_{k=a}^b k^m = \sum_{m=0}^d \frac{c_m ((b+1)^{m+1} - a^{m+1})}{m+1}.$$

The only problem is that in many cases one does not have a polynomial given in the representation of falling factorials but in the standard form

$$\sum_{m=0}^d \bar{c}_m x^m \in \mathbb{K}[x].$$

Luckily one can rewrite a polynomial written in the basis

$$1, x, x^2, \dots, x^d$$

to the representation written in the basis

$$x^{\underline{0}} = 1, x^{\underline{1}} = x, x^{\underline{2}} = x(x-1), \dots, x^{\underline{d}} = x(x-1) \dots (x-d+1)$$

by using the formula

$$x^m = \sum_{k=0}^m S(m, k) x^{\underline{k}}$$

where $S(n, k)$ denotes the Stirling numbers of second kind. They can be computed by

$$S(n, k) = \frac{1}{k!} \sum_{i=0}^k (-1)^i \binom{k}{i} (k-i)^n;$$

Example. Consider the polynomial

$$f(x) = x^4.$$

Using the formulas from above, we get

$$f(x) = x^4 = \sum_{k=0}^4 S(4, k)x^k = 0x^0 + 1x^1 + 7x^2 + 6x^3 + 1x^4.$$

Thus we get

$$\begin{aligned} g(x) &= \frac{1}{2}x^2 + \frac{7}{3}x^3 + \frac{3}{2}x^4 + \frac{1}{5}x^5 \\ &= \frac{1}{30}(x-1)x(2x-1)(3x^2-3x-1). \end{aligned}$$

such that

$$g(x+1) - g(x) = f(x)$$

holds. In particular we get

$$\sum_{k=1}^n k^4 = \sum_{k=1}^n f(k) = g(n+1) - g(1) = \frac{1}{30}n(n+1)(2n+1)(3n^2+3n-1).$$

Tactic 2: linear algebra.

We use the following property: for $f(x) \in \mathbb{K}[x]$ there is a $g(x) \in \mathbb{K}[x]$ with (1) where

$$\deg(g) \leq \deg(f) + 1.$$

Thus setting $d := \deg(f) + 1$ for given $f \in \mathbb{K}[x]$ the desired solution has the form

$$g(x) = \sum_{m=0}^d g_m x^m$$

and we can determine the unknowns $g_0, \dots, g_d \in \mathbb{K}$ by linear algebra as follows.

Example. Take $f(x) = x^4 \in \mathbb{Q}[x]$. With $d = \deg(f) + 1 = 5$ the ansatz

$$g(x) = g_0 + g_1x + g_2x^2 + g_3x^3 + g_4x^4 + g_5x^5$$

for the unknowns $g_0, g_1, g_2, g_3, g_4, g_5 \in \mathbb{Q}$ is in place. This gives

$$\begin{aligned} x^4 = \Delta g(x) &= g(x+1) - g(x) = 0x^5 \\ &+ 5g_5x^4 \\ &+ (4g_4 + 10g_5)x^3 \\ &+ (3g_3 + 6g_4 + 10g_5)x^2 \\ &+ (2g_2 + 3g_3 + 4g_4 + 5g_5)x \\ &+ (g_1 + g_2 + g_3 + g_4 + g_5)x^0. \end{aligned}$$

By coefficient comparison this yields the linear system

$$\begin{array}{ll} [x^4] & 1 = 5g_5 \\ [x^3] & 0 = 4g_4 + 10g_5 \\ [x^2] & 0 = 3g_3 + 6g_4 + 10g_5 \\ [x^1] & 0 = 2g_2 + 3g_3 + 4g_4 + 5g_5 \\ [x^0] & 0 = g_1 + g_2 + g_3 + g_4 + g_5 \end{array}$$

which is already in triangular form.

Thus we can read off the solution

$$g_5 = \frac{1}{5}, \quad g_4 = -\frac{1}{2}, \quad g_3 = \frac{1}{3}, \quad g_2 = 0, \quad g_1 = -\frac{1}{30}, \quad g_0 = c$$

with $c \in \mathbb{Q}$. In particular, we can choose $c = 0$ and obtain

$$g(x) = \frac{x^5}{5} - \frac{x^4}{2} + \frac{x^3}{3} - \frac{x}{30} = \frac{1}{30}(x-1)x(2x-1)(3x^2-3x-1).$$

To this end, we continue as in the previous example and get the desired result.

More general summation objects for indefinite and definite summation

Clearly, the first tactic is very elegant, but it works only for the special case of polynomial summation. For the second tactic one has to work more (i.e., has to solve in addition a linear system), but it turns out to be more general. More precisely, one can carry over these ideas to a rather general setting that works not only for the polynomial ring $\mathbb{Q}[x]$ but in more general rings called $R\Pi\Sigma$ -difference rings that have been implemented within the summation package Sigma. In the following all technical details are omitted and we proceed with a concrete example.

Example. We want to sum

$$\sum_{k=0}^n H_k.$$

In order to accomplish this task, we take

$$f(k) = H_k$$

and search for

$$g(k) \in \mathbb{Q}(k)[H_k]$$

with

$$f(k) = g(k+1) - g(k).$$

Here we can use a similar tactic as used in the case of polynomial summation. Namely, summation theory tells us that any such solution $g(k)$ has the property

$$\deg(g) \leq \deg(f) + 1 = 1 + 1 = 2.$$

As a consequence we can make the ansatz

$$g(k) = g_0(k)H_k^0 + g_1(k)H_k^1 + g_2(k)H_k^2$$

with $g_0(k), g_1(k), g_2(k) \in \mathbb{Q}(k)$.

Using recursive algorithms and linear system solving (details are skipped here) we find

$$g_0(k) = -k$$

$$g_1(k) = k$$

$$g_2(k) = 0,$$

i.e.,

$$g(k) = -k + kH_k + 0H_k^2.$$

Hence summing the telescoping equation over k from 0 to n gives

$$\sum_{k=0}^n H_k = g(n+1) - g(0) = (n+1)H_{n+1} - (n+1) = -n + (1+n)H_n.$$

The above machinery can be carried out within the summation package **Sigma**. After loading it into Mathematica

```
In[1]:= << Sigma.m
```

Sigma - A summation package by Carsten Schneider © RISC-JKU

one can insert the above sum

```
In[2]:= mySum = SigmaSum[SigmaHNumber[k], {k, 0, 1}]
```

$$\text{Out[2]} = \sum_{k=0}^n H_k$$

and can apply the command

```
In[3]:= SigmaReduce[mySum]
```

$$\text{Out[3]} = -n + (1 + n)H_n$$

In general one can insert, e.g., a sum of the form

$$\sum_{k=l}^n f(k)$$

with $l \in \mathbb{N}$ where $f(k)$ itself is given in terms of indefinite nested sums defined over hypergeometric products.

Definition

Let \mathbb{K} be a field. A product $\prod_{j=l}^k f(j)$, $l \in \mathbb{N}$, is called **hypergeometric in k over \mathbb{K}** if $f(x) \in \mathbb{K}(x)$ is a rational function where the numerator and denominator of $f(j)$ are nonzero for all $j \in \mathbb{Z}$ with $j \geq l$. An **expression in terms indefinite of nested sums over hypergeometric products in k over \mathbb{K}** is composed recursively by the three operations $(+, -, \cdot)$ with

- ▶ elements from the rational function field $\mathbb{K}(k)$,
- ▶ hypergeometric products in k over \mathbb{K} ,
- ▶ and sums of the form $\sum_{j=l}^k f(j)$ with $l \in \mathbb{N}$ where $f(j)$ is an expression in terms of indefinite nested sums over hypergeometric products in j over \mathbb{K} ; here it is assumed that the evaluation of $f(j)$ for all $j \geq l$ does not introduce any poles.

In[4]:= **mySum** =

SigmaSum[**SigmaPower**[-1, k]**SigmaBinomial**[n, k]**SigmaHNumber**[k], {k, a, b}]

$$\text{Out[4]} = \sum_{k=a}^b (-1)^k \binom{n}{k} H_k$$

In[5]:= **SigmaReduce**[**mySum**]

$$\text{Out[5]} = \left(\frac{(a-n)(-1+a-n)}{an^2} + \frac{(-1+a-n)H_a}{n} \right) (-1)^{1+a} \binom{n}{-1+a} + \left(\frac{-b+n}{n^2} + \frac{(-b+n)H_b}{n} \right) (-1)^b \binom{n}{b}$$

In[6]:= **mySum** = **SigmaSum**[**SigmaSum**[**SigmaBinomial**[n, k], {k, 0, r}]², {r, 0, b}]

$$\text{Out[6]} = \sum_{r=0}^b \left(\sum_{k=0}^r \binom{n}{k} \right)^2$$

In[7]:= **SigmaReduce**[**mySum**]

$$\text{Out[7]} = (-b+n) \binom{n}{b} \sum_{i_1=0}^b \binom{n}{i_1} + \frac{1}{2}(2+2b-n) \left(\sum_{i_1=0}^b \binom{n}{i_1} \right)^2 - \frac{1}{2}n \sum_{i_1=0}^b \binom{n}{i_1}^2$$

The ground field (throughout this talk): $\mathbb{G} = \mathbb{K}(x)$

The ground field (throughout this talk): $\mathbb{G} = \mathbb{K}(x)$

- For any element $f = \frac{p}{q} \in \mathbb{G}$ with $p, q \in \mathbb{K}[x]$ where $q \neq 0$ and p, q being coprime we define

$$\text{ev}(f, k) = \begin{cases} 0 & \text{if } q(k) = 0 \\ \frac{p(k)}{q(k)} & \text{if } q(k) \neq 0. \end{cases}$$

The ground field (throughout this talk): $\mathbb{G} = \mathbb{K}(x)$

- For any element $f = \frac{p}{q} \in \mathbb{G}$ with $p, q \in \mathbb{K}[x]$ where $q \neq 0$ and p, q being coprime we define

$$\text{ev}(f, k) = \begin{cases} 0 & \text{if } q(k) = 0 \\ \frac{p(k)}{q(k)} & \text{if } q(k) \neq 0. \end{cases}$$

- We define $L(f)$ to be the minimal value $\delta \in \mathbb{N}$ such that $q(k) \neq 0$ holds for all $k \geq \delta$; further,

$$Z(f) = \max(L(\frac{1}{p}), L(\frac{1}{q})) \quad \text{if } f \neq 0.$$

The ground field (throughout this talk): $\mathbb{G} = \mathbb{K}(x)$

- For any element $f = \frac{p}{q} \in \mathbb{G}$ with $p, q \in \mathbb{K}[x]$ where $q \neq 0$ and p, q being coprime we define

$$\text{ev}(f, k) = \begin{cases} 0 & \text{if } q(k) = 0 \\ \frac{p(k)}{q(k)} & \text{if } q(k) \neq 0. \end{cases}$$

- We define $L(f)$ to be the minimal value $\delta \in \mathbb{N}$ such that $q(k) \neq 0$ holds for all $k \geq \delta$; further,

$$Z(f) = \max(L(\frac{1}{p}), L(\frac{1}{q})) \quad \text{if } f \neq 0.$$

Example: For

$$f = \frac{p}{q} = \frac{x - 4}{(x - 3)(x - 1)}$$

we get

$$(\text{ev}(f, n))_{n \geq 0} = (-\frac{4}{3}, \underline{0}, 2, \underline{0}, 0, \frac{1}{8}, \dots) \in \mathbb{Q}^{\mathbb{N}}$$

For $n \geq L(f) = 4$ no poles arise;

for $n \geq Z(f) = \max(L(\frac{1}{p}), L(\frac{1}{q})) = \max(4, 5) = 5$ no zeroes arise.

The ground field (throughout this talk): $\mathbb{G} = \mathbb{K}(x)$

- For any element $f = \frac{p}{q} \in \mathbb{G}$ with $p, q \in \mathbb{K}[x]$ where $q \neq 0$ and p, q being coprime we define

$$\text{ev}(f, k) = \begin{cases} 0 & \text{if } q(k) = 0 \\ \frac{p(k)}{q(k)} & \text{if } q(k) \neq 0. \end{cases}$$

- We define $L(f)$ to be the minimal value $\delta \in \mathbb{N}$ such that $q(k) \neq 0$ holds for all $k \geq \delta$; further,

$$Z(f) = \max(L(\frac{1}{p}), L(\frac{1}{q})) \quad \text{if } f \neq 0.$$

- We define

$$\mathcal{R} = \{r \in \mathbb{K} \setminus \{1\} \mid r \text{ is a root of unity}\}$$

with the function $\text{ord} : \mathcal{R} \rightarrow \mathbb{Z}_{\geq 1}$ where

$$\text{ord}(r) = \min\{n \in \mathbb{Z}_{\geq 1} \mid r^n = 1\}.$$

\mathbb{G} \longrightarrow $\text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

Let \otimes , \oplus , \odot , Sum , Prod and RPow be operations with the signatures

$$\begin{array}{lll}

 \text{RPow} : & \mathcal{R} & \rightarrow \text{SumProd}(\mathbb{G}).
 \end{array}$$

$\text{Prod}^*(\mathbb{G})$ = the smallest set that contains 1 with the following properties:

1. If $r \in \mathcal{R}$ then $\text{RPow}(r) \in \text{Prod}^*(\mathbb{G})$.
2. If $f \in \mathbb{G}^*$ and $l \in \mathbb{N}$ with $l \geq Z(f)$ then $\text{Prod}(l, f) \in \text{Prod}^*(\mathbb{G})$.
3. If $p, q \in \text{Prod}^*(\mathbb{G})$ then $p \odot q \in \text{Prod}^*(\mathbb{G})$.
4. If $p \in \text{Prod}^*(\mathbb{G})$ and $z \in \mathbb{Z} \setminus \{0\}$ then $p^{\oslash} z \in \text{Prod}^*(\mathbb{G})$.

$\mathbb{G} \longrightarrow \text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

Let \oslash , \oplus , \odot , Sum , Prod and RPow be operations with the signatures

$$\begin{array}{lll}
 \oslash : & \text{SumProd}(\mathbb{G}) \times \mathbb{Z} & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \oplus : & \text{SumProd}(\mathbb{G}) \times \text{SumProd}(\mathbb{G}) & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \odot : & \text{SumProd}(\mathbb{G}) \times \text{SumProd}(\mathbb{G}) & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \text{Sum} : & \mathbb{N} \times \text{SumProd}(\mathbb{G}) & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \text{Prod} : & \mathbb{N} \times \text{SumProd}(\mathbb{G}) & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \text{RPow} : & \mathcal{R} & \rightarrow \text{SumProd}(\mathbb{G}).
 \end{array}$$

$\text{Prod}^*(\mathbb{G})$ = the smallest set that contains 1 with the following properties:

1. If $r \in \mathcal{R}$ then $\text{RPow}(r) \in \text{Prod}^*(\mathbb{G})$.
2. If $f \in \mathbb{G}^*$ and $l \in \mathbb{N}$ with $l \geq Z(f)$ then $\text{Prod}(l, f) \in \text{Prod}^*(\mathbb{G})$.
3. If $p, q \in \text{Prod}^*(\mathbb{G})$ then $p \odot q \in \text{Prod}^*(\mathbb{G})$.
4. If $p \in \text{Prod}^*(\mathbb{G})$ and $z \in \mathbb{Z} \setminus \{0\}$ then $p^{\oslash} z \in \text{Prod}^*(\mathbb{G})$.

Furthermore, we define

$$\Pi(\mathbb{G}) = \{\text{RPow}(r) \mid r \in \mathcal{R}\} \cup \{\text{Prod}(l, f) \mid f \in \mathbb{G}, l \in \mathbb{N}\}.$$

$\mathbb{G} \longrightarrow \text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

Let \oslash , \oplus , \odot , Sum , Prod and RPow be operations with the signatures

$$\begin{array}{lll}
 \oslash : & \text{SumProd}(\mathbb{G}) \times \mathbb{Z} & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \oplus : & \text{SumProd}(\mathbb{G}) \times \text{SumProd}(\mathbb{G}) & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \odot : & \text{SumProd}(\mathbb{G}) \times \text{SumProd}(\mathbb{G}) & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \text{Sum} : & \mathbb{N} \times \text{SumProd}(\mathbb{G}) & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \text{Prod} : & \mathbb{N} \times \text{SumProd}(\mathbb{G}) & \rightarrow \text{SumProd}(\mathbb{G}) \\
 \text{RPow} : & \mathcal{R} & \rightarrow \text{SumProd}(\mathbb{G}).
 \end{array}$$

$\text{Prod}^*(\mathbb{G})$ = the smallest set that contains 1 with the following properties:

1. If $r \in \mathcal{R}$ then $\text{RPow}(r) \in \text{Prod}^*(\mathbb{G})$.
2. If $f \in \mathbb{G}^*$ and $l \in \mathbb{N}$ with $l \geq Z(f)$ then $\text{Prod}(l, f) \in \text{Prod}^*(\mathbb{G})$.
3. If $p, q \in \text{Prod}^*(\mathbb{G})$ then $p \odot q \in \text{Prod}^*(\mathbb{G})$.
4. If $p \in \text{Prod}^*(\mathbb{G})$ and $z \in \mathbb{Z} \setminus \{0\}$ then $p^{\oslash} z \in \text{Prod}^*(\mathbb{G})$.

Example: In $\mathbb{G} = \mathbb{Q}(x)$ we get

$$P = \underbrace{(\text{Prod}(1, x)^{\oslash}(-2))}_{\in \Pi(\mathbb{G})} \odot \underbrace{\text{RPow}(-1)}_{\Pi(\mathbb{G})} \in \text{Prod}^*(\mathbb{G}).$$

$\mathbb{G} \longrightarrow \text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

SumProd(\mathbb{G}) = the smallest set containing $\mathbb{G} \cup \text{Prod}^*(\mathbb{G})$ with:

1. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \oplus g \in \text{SumProd}(\mathbb{G})$.

$\mathbb{G} \longrightarrow \text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

SumProd(\mathbb{G}) = the smallest set containing $\mathbb{G} \cup \text{Prod}^*(\mathbb{G})$ with:

1. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \oplus g \in \text{SumProd}(\mathbb{G})$.
2. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \odot g \in \text{SumProd}(\mathbb{G})$.

$\mathbb{G} \longrightarrow \text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

SumProd(\mathbb{G}) = the smallest set containing $\mathbb{G} \cup \text{Prod}^*(\mathbb{G})$ with:

1. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \oplus g \in \text{SumProd}(\mathbb{G})$.
2. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \odot g \in \text{SumProd}(\mathbb{G})$.
3. For all $f \in \text{SumProd}(\mathbb{G})$ and $k \in \mathbb{Z}_{\geq 1}$ we have $f^{\triangle k} \in \text{SumProd}(\mathbb{G})$.

$\mathbb{G} \longrightarrow \text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

SumProd(\mathbb{G}) = the smallest set containing $\mathbb{G} \cup \text{Prod}^*(\mathbb{G})$ with:

1. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \oplus g \in \text{SumProd}(\mathbb{G})$.
2. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \odot g \in \text{SumProd}(\mathbb{G})$.
3. For all $f \in \text{SumProd}(\mathbb{G})$ and $k \in \mathbb{Z}_{\geq 1}$ we have $f^{\triangle k} \in \text{SumProd}(\mathbb{G})$.
4. For all $f \in \text{SumProd}(\mathbb{G})$ and $l \in \mathbb{N}$ we have $\text{Sum}(l, f) \in \text{SumProd}(\mathbb{G})$.

$\mathbb{G} \longrightarrow \text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

SumProd(\mathbb{G}) = the smallest set containing $\mathbb{G} \cup \text{Prod}^*(\mathbb{G})$ with:

1. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \oplus g \in \text{SumProd}(\mathbb{G})$.
2. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \odot g \in \text{SumProd}(\mathbb{G})$.
3. For all $f \in \text{SumProd}(\mathbb{G})$ and $k \in \mathbb{Z}_{\geq 1}$ we have $f^{\triangleleft k} \in \text{SumProd}(\mathbb{G})$.
4. For all $f \in \text{SumProd}(\mathbb{G})$ and $l \in \mathbb{N}$ we have $\text{Sum}(l, f) \in \text{SumProd}(\mathbb{G})$.

Furthermore, the **set of nested sums over hypergeometric products** is given by

$$\Sigma(\mathbb{G}) = \{\text{Sum}(l, f) \mid l \in \mathbb{N} \text{ and } f \in \text{SumProd}(\mathbb{G})\}$$

and the **set of nested sums and hypergeometric products** is given by

$$\Sigma\Pi(\mathbb{G}) = \Sigma(\mathbb{G}) \cup \Pi(\mathbb{G}).$$

$\mathbb{G} \longrightarrow \text{SumProd}(\mathbb{G})$ (nested sums over hypergeometric products)

SumProd(\mathbb{G}) = the smallest set containing $\mathbb{G} \cup \text{Prod}^*(\mathbb{G})$ with:

1. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \oplus g \in \text{SumProd}(\mathbb{G})$.
2. For all $f, g \in \text{SumProd}(\mathbb{G})$ we have $f \odot g \in \text{SumProd}(\mathbb{G})$.
3. For all $f \in \text{SumProd}(\mathbb{G})$ and $k \in \mathbb{Z}_{\geq 1}$ we have $f^{\triangleleft k} \in \text{SumProd}(\mathbb{G})$.
4. For all $f \in \text{SumProd}(\mathbb{G})$ and $l \in \mathbb{N}$ we have $\text{Sum}(l, f) \in \text{SumProd}(\mathbb{G})$.

Example

With $\mathbb{G} = \mathbb{K}(x)$ we get, e.g., the following expressions:

$$E_1 = \text{Sum}(1, \text{Prod}(1, x)) \in \Sigma(\mathbb{G}) \subset \text{SumProd}(\mathbb{G}),$$

$$E_2 = \text{Sum}(1, \frac{1}{x+1} \odot \text{Sum}(1, \frac{1}{x^3}) \odot \text{Sum}(1, \frac{1}{x})) \in \Sigma(\mathbb{G}) \subset \text{SumProd}(\mathbb{G}),$$

$$E_3 = (E_1 \oplus E_2) \odot E_1 \in \text{SumProd}(\mathbb{G}).$$

$$\text{ev} : \mathbb{G} \times \mathbb{N} \rightarrow \mathbb{K} \quad \longrightarrow \quad \text{ev} : \text{SumProd}(\mathbb{G}) \times \mathbb{N} \rightarrow \mathbb{K}$$

$$\text{ev} : \mathbb{G} \times \mathbb{N} \rightarrow \mathbb{K} \quad \longrightarrow \quad \text{ev} : \text{SumProd}(\mathbb{G}) \times \mathbb{N} \rightarrow \mathbb{K}$$

1. For $f, g \in \text{SumProd}(\mathbb{G})$, $k \in \mathbb{Z} \setminus \{0\}$ ($k > 0$ if $f \notin \text{Prod}^*(\mathbb{G})$) we set

$$\text{ev}(f^{\triangleleft} k, n) := \text{ev}(f, n)^k,$$

$$\text{ev}(f \oplus g, n) := \text{ev}(f, n) + \text{ev}(g, n),$$

$$\text{ev}(f \odot g, n) := \text{ev}(f, n) \text{ ev}(g, n);$$

$$\text{ev} : \mathbb{G} \times \mathbb{N} \rightarrow \mathbb{K} \quad \longrightarrow \quad \text{ev} : \text{SumProd}(\mathbb{G}) \times \mathbb{N} \rightarrow \mathbb{K}$$

1. For $f, g \in \text{SumProd}(\mathbb{G})$, $k \in \mathbb{Z} \setminus \{0\}$ ($k > 0$ if $f \notin \text{Prod}^*(\mathbb{G})$) we set

$$\text{ev}(f^{\bigtriangleup} k, n) := \text{ev}(f, n)^k,$$

$$\text{ev}(f \oplus g, n) := \text{ev}(f, n) + \text{ev}(g, n),$$

$$\text{ev}(f \odot g, n) := \text{ev}(f, n) \text{ ev}(g, n);$$

2. for $r \in \mathcal{R}$ and $\text{Sum}(l, f), \text{Prod}(\lambda, g) \in \text{SumProd}(\mathbb{G})$ we define

$$\text{ev}(\text{RPow}(r), n) := \prod_{i=1}^n r = r^n,$$

$$\text{ev}(\text{Sum}(l, f), n) := \sum_{i=l}^n \text{ev}(f, i),$$

$$\text{ev}(\text{Prod}(\lambda, g), n) := \prod_{i=\lambda}^n \text{ev}(g, i) = \prod_{i=\lambda}^n g(i).$$

$$\text{ev} : \mathbb{G} \times \mathbb{N} \rightarrow \mathbb{K} \quad \longrightarrow \quad \text{ev} : \text{SumProd}(\mathbb{G}) \times \mathbb{N} \rightarrow \mathbb{K}$$

1. For $f, g \in \text{SumProd}(\mathbb{G})$, $k \in \mathbb{Z} \setminus \{0\}$ ($k > 0$ if $f \notin \text{Prod}^*(\mathbb{G})$) we set

$$\text{ev}(f^{\bigtriangleup} k, n) := \text{ev}(f, n)^k,$$

$$\text{ev}(f \oplus g, n) := \text{ev}(f, n) + \text{ev}(g, n),$$

$$\text{ev}(f \odot g, n) := \text{ev}(f, n) \text{ ev}(g, n);$$

2. for $r \in \mathcal{R}$ and $\text{Sum}(l, f), \text{Prod}(\lambda, g) \in \text{SumProd}(\mathbb{G})$ we define

$$\text{ev}(\text{RPow}(r), n) := \prod_{i=1}^n r = r^n,$$

$$\text{ev}(\text{Sum}(l, f), n) := \sum_{i=l}^n \text{ev}(f, i),$$

$$\text{ev}(\text{Prod}(\lambda, g), n) := \prod_{i=\lambda}^n \text{ev}(g, i) = \prod_{i=\lambda}^n g(i).$$

Note: $\Pi(\mathbb{G})$ defines all hypergeometric products (which evaluate to sequences with non-zero entries).

ev applied to $f \in \text{SumProd}(\mathbb{G})$ represents a sequence.

f can be considered as a simple program and $\text{ev}(f, n)$ with $n \in \mathbb{N}$ executes it (like an interpreter/compiler) yielding the n th entry of the represented sequence.

Definition

For $F \in \text{SumProd}(\mathbb{G})$ and $n \in \mathbb{N}$ we write $F(n) := \text{ev}(F, n)$.

ev applied to $f \in \text{SumProd}(\mathbb{G})$ represents a sequence.

f can be considered as a simple program and $\text{ev}(f, n)$ with $n \in \mathbb{N}$ executes it (like an interpreter/compiler) yielding the n th entry of the represented sequence.

Definition

For $F \in \text{SumProd}(\mathbb{G})$ and $n \in \mathbb{N}$ we write $F(n) := \text{ev}(F, n)$.

Example

For $E_i \in \text{SumProd}(\mathbb{K}(x))$ with $i = 1, 2, 3$ we get

$$E_1(n) = \text{ev}(E_1, n) = \text{ev}(\text{Sum}(1, \text{Prod}(1, x)), n) = \sum_{k=1}^n \prod_{i=1}^k i = \sum_{k=1}^n k!,$$

ev applied to $f \in \text{SumProd}(\mathbb{G})$ represents a sequence.

f can be considered as a simple program and $\text{ev}(f, n)$ with $n \in \mathbb{N}$ executes it (like an interpreter/compiler) yielding the n th entry of the represented sequence.

Definition

For $F \in \text{SumProd}(\mathbb{G})$ and $n \in \mathbb{N}$ we write $F(n) := \text{ev}(F, n)$.

Example

For $E_i \in \text{SumProd}(\mathbb{K}(x))$ with $i = 1, 2, 3$ we get

$$E_1(n) = \text{ev}(E_1, n) = \text{ev}(\text{Sum}(1, \text{Prod}(1, x)), n) = \sum_{k=1}^n \prod_{i=1}^k i = \sum_{k=1}^n k!,$$

$$E_2(n) = \text{ev}(\text{Sum}(1, \frac{1}{x+1} \odot \text{Sum}(1, \frac{1}{x^3}) \odot \text{Sum}(1, \frac{1}{x})), n)$$

$$= \sum_{k=1}^n \frac{1}{1+k} \left(\sum_{i=1}^k \frac{1}{i^3} \right) \sum_{i=1}^k \frac{1}{i}$$

ev applied to $f \in \text{SumProd}(\mathbb{G})$ represents a sequence.

f can be considered as a simple program and $\text{ev}(f, n)$ with $n \in \mathbb{N}$ executes it (like an interpreter/compiler) yielding the n th entry of the represented sequence.

Definition

For $F \in \text{SumProd}(\mathbb{G})$ and $n \in \mathbb{N}$ we write $F(n) := \text{ev}(F, n)$.

Example

For $E_i \in \text{SumProd}(\mathbb{K}(x))$ with $i = 1, 2, 3$ we get

$$E_1(n) = \text{ev}(E_1, n) = \text{ev}(\text{Sum}(1, \text{Prod}(1, x)), n) = \sum_{k=1}^n \prod_{i=1}^k i = \sum_{k=1}^n k!,$$

$$E_2(n) = \text{ev}(\text{Sum}(1, \frac{1}{x+1} \odot \text{Sum}(1, \frac{1}{x^3}) \odot \text{Sum}(1, \frac{1}{x})), n)$$

$$= \sum_{k=1}^n \frac{1}{1+k} \left(\sum_{i=1}^k \frac{1}{i^3} \right) \sum_{i=1}^k \frac{1}{i}$$

$$E_3(n) = (E_1(n) + E_2(n))E_1(n)$$

General picture:

Definition

An expression $A \in \text{SumProd}(\mathbb{G})$ is in **reduced representation** if

$$A = (f_1 \odot P_1) \oplus (f_2 \odot P_2) \oplus \cdots \oplus (f_r \odot P_r) \quad (4)$$

$$W \text{ is shift-stable} \quad \begin{matrix} \Rightarrow \\ \nLeftarrow \end{matrix} \quad W \text{ is shift-closed}$$

Key-Definitions: Let $W \subseteq \Sigma\Pi(\mathbb{G})$.

SumProd (W, \mathbb{G}) = the set of elements from $\text{SumProd}(\mathbb{G})$ which are in reduced representation and the arising sums/products are taken from W .

- W is called **shift-closed over** \mathbb{G} if for any $A \in \text{SumProd}(W, \mathbb{G})$, $s \in \mathbb{Z}$ there are $B \in \text{SumProd}(W, \mathbb{G})$ and $\delta \in \mathbb{N}$ such that

$$A(n + s) = B(n) \quad \forall n \geq \delta.$$

- W is called **shift-stable over** \mathbb{G} if for any product or sum in W the multiplicand or summand is built by sums and products from W .
- W is called **canonical reduced over** \mathbb{G} if for any $A, B \in \text{SumProd}(W, \mathbb{G})$ with

$$A(n) = B(n) \quad \forall n \geq \delta$$

for some $\delta \in \mathbb{N}$ the following holds: A and B are the same up to permutations of the operands in \oplus and \odot .

Definition

$W \subseteq \Sigma\Pi(\mathbb{G})$ is called **σ -reduced over \mathbb{G}** if

1. the elements in W are in sum-product reduced form,
2. W is shift-stable (and thus shift-closed) and
3. W is canonical reduced.

In particular, $A \in \text{SumProd}(W, \mathbb{G})$ is called **σ -reduced (w.r.t. W)** if W is σ -reduced over \mathbb{G} .

Definition

$W \subseteq \Sigma\Pi(\mathbb{G})$ is called **σ -reduced over \mathbb{G}** if

1. the elements in W are in sum-product reduced form,
2. W is shift-stable (and thus shift-closed) and
3. W is canonical reduced.

In particular, $A \in \text{SumProd}(W, \mathbb{G})$ is called **σ -reduced (w.r.t. W)** if W is σ -reduced over \mathbb{G} .

Problem SigmaReduce: Compute a σ -reduced representation

Given: $A_1, \dots, A_u \in \text{SumProd}(\mathbb{G})$ with $\mathbb{G} = \mathbb{K}(x)$.

Find: a σ -reduced set $W = \{T_1, \dots, T_e\} \subset \Sigma\Pi(\mathbb{G})$,
 $B_1, \dots, B_u \in \text{SumProd}(W, \mathbb{G})$ and $\delta_1, \dots, \delta_u \in \mathbb{N}$
 such that for all $1 \leq i \leq r$ we get

$$A_i(n) = B_i(n) \quad n \geq \delta_i.$$

- **Canonical representation in term algebras**

 A_1  B_1 σ -reducedin $\text{SumProd}(\mathbb{G})$

$$\forall n \geq \delta \quad \text{ev}(A_1, n) = \text{ev}(B_1, n)$$

- **Canonical representation in term algebras**

$$\begin{array}{c} A_1 \\ \downarrow \\ B_1 \end{array}$$

σ -reduced

$$\begin{array}{c} A_2 \\ \downarrow \\ B_2 \end{array}$$

in $\text{SumProd}(\mathbb{G})$

$$\forall n \geq \delta \quad \text{ev}(A_1, n) = \text{ev}(B_1, n)$$

$$\text{ev}(A_2, n) = \text{ev}(B_2, n)$$

- Canonical representation in term algebras**

$$\begin{array}{c} A_1 \\ \downarrow \\ B_1 \end{array}$$

σ -reduced

$$\begin{array}{c} A_2 \\ \downarrow \\ B_2 \end{array}$$

in $\text{SumProd}(\mathbb{G})$

$$\forall n \geq \delta \quad \text{ev}(A_1, n) = \text{ev}(B_1, n) \quad = \quad \text{ev}(A_2, n) = \text{ev}(B_2, n)$$

canonical simplifier

$$B_1 = B_2$$

Summary: we rephrase $H \in \text{SumProd}(\mathbb{G})$ as element h in a formal difference ring. More precisely, we will design

- ▶ a ring \mathbb{A} with $\mathbb{A} \supseteq \mathbb{G} \supseteq \mathbb{K}$ in which H can be represented by $h \in \mathbb{A}$;
- ▶ an evaluation function $\text{ev} : \mathbb{A} \times \mathbb{N} \rightarrow \mathbb{K}$ such that $H(n) = \text{ev}(h, n)$ holds for sufficiently large $n \in \mathbb{N}$;
- ▶ a ring automorphism $\sigma : \mathbb{A} \rightarrow \mathbb{A}$ which models $H(n+1)$ with $\sigma(h)$.

A hypergeometric *APS*-extension of $(\mathbb{K}(x), \sigma)$ is

- ▶ a ring

$$\mathbb{A} := \mathbb{K}(x)$$

- ▶ with an automorphism where $\sigma(c) = c$ for all $c \in \mathbb{K}$ and where

$$\sigma(x) = x + 1$$

A hypergeometric *APS*-extension of $(\mathbb{K}(x), \sigma)$ is

- ▶ a ring

$$\mathbb{A} := \mathbb{K}(x)$$

- ▶ with an automorphism where $\sigma(c) = c$ for all $c \in \mathbb{K}$ and where

$$\sigma(x) = x + 1$$

$$S_k! = (k+1)k!$$

A hypergeometric *APS*-extension of $(\mathbb{K}(x), \sigma)$ is

Definition (Evaluation function)

Take (\mathbb{A}, σ) with a subfield \mathbb{K} of \mathbb{A} with $\sigma|_{\mathbb{K}} = \text{id}$.

1. $\text{ev} : \mathbb{A} \times \mathbb{N} \rightarrow \mathbb{K}$ is called **evaluation function** for (\mathbb{A}, σ) if for all $f, g \in \mathbb{A}$, $c \in \mathbb{K}$ and $l \in \mathbb{Z}$ there exists a $\lambda \in \mathbb{N}$ with

$$\forall n \geq \lambda : \text{ev}(c, n) = c, \quad (5)$$

$$\forall n \geq \lambda : \text{ev}(f + g, n) = \text{ev}(f, n) + \text{ev}(g, n), \quad (6)$$

$$\forall n \geq \lambda : \text{ev}(f g, n) = \text{ev}(f, n) \text{ev}(g, n), \quad (7)$$

$$\forall n \geq \lambda : \text{ev}(\sigma^l(f), n) = \text{ev}(f, n + l). \quad (8)$$

Definition (Evaluation function)

Take (\mathbb{A}, σ) with a subfield \mathbb{K} of \mathbb{A} with $\sigma|_{\mathbb{K}} = \text{id}$.

1. $\text{ev} : \mathbb{A} \times \mathbb{N} \rightarrow \mathbb{K}$ is called **evaluation function** for (\mathbb{A}, σ) if for all $f, g \in \mathbb{A}$, $c \in \mathbb{K}$ and $l \in \mathbb{Z}$ there exists a $\lambda \in \mathbb{N}$ with

$$\forall n \geq \lambda : \text{ev}(c, n) = c, \quad (5)$$

$$\forall n \geq \lambda : \text{ev}(f + g, n) = \text{ev}(f, n) + \text{ev}(g, n), \quad (6)$$

$$\forall n \geq \lambda : \text{ev}(f g, n) = \text{ev}(f, n) \text{ev}(g, n), \quad (7)$$

$$\forall n \geq \lambda : \text{ev}(\sigma^l(f), n) = \text{ev}(f, n + l). \quad (8)$$

2. $L : \mathbb{A} \rightarrow \mathbb{N}$ is called **o-function** if for any $f, g \in \mathbb{A}$ with $\lambda = \max(L(f), L(g))$ the properties (6) and (7) hold and for any $f \in \mathbb{A}$ and $l \in \mathbb{Z}$ with $\lambda = L(f) + \max(0, -l)$ property (8) holds.

Connection between $\text{SumProd}(\mathbb{G})$ and hypergeometric APS -extension

- **Observation 1:** Given $\{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$, one can construct a hypergeometric APS -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with ev and L such that there are $a_1, \dots, a_e \in \mathbb{E}$ and $\delta_1, \dots, \delta_e$ with $\text{ev}(a_i, n) = T_i(n)$.

Connection between $\text{SumProd}(\mathbb{G})$ and hypergeometric APS -extension

• **Observation 1:** Given $\{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$, one can construct a hypergeometric APS -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with ev and L such that there are $a_1, \dots, a_e \in \mathbb{E}$ and $\delta_1, \dots, \delta_e$ with $\text{ev}(a_i, n) = T_i(n)$.

• **Observation 2:**

(\mathbb{E}, σ) with $\mathbb{E} = \mathbb{G}\langle t_1 \rangle \dots \langle t_e \rangle$ a hypergeometric APS -extension of (\mathbb{G}, σ)
 $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$, $L : \mathbb{E} \rightarrow \mathbb{N}$

$$\forall n \geq L(t_i) : \\ \text{ev}(t_i, n) = T_i(n) \in \Sigma\Pi(\mathbb{G})$$

$W = \{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$ is sum-product reduced and
 shift stable: sums/products in T_i are from $\{T_1, \dots, T_{i-1}\}$.

In particular, if $f \in \mathbb{E} \setminus \{0\}$, then we can take the "unique"
 $0 \neq F \in \text{SumProd}(\{T_1, \dots, T_e\}, \mathbb{G})$ with $F(n) = \text{ev}(f, n)$ for all $n \geq L(f)$.

Connection between $\text{SumProd}(\mathbb{G})$ and hypergeometric APS -extension

• **Observation 1:** Given $\{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$, one can construct a hypergeometric APS -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with ev and L such that there are $a_1, \dots, a_e \in \mathbb{E}$ and $\delta_1, \dots, \delta_e$ with $\text{ev}(a_i, n) = T_i(n)$.

• **Observation 2:**

(\mathbb{E}, σ) with $\mathbb{E} = \mathbb{G}\langle t_1 \rangle \dots \langle t_e \rangle$ a hypergeometric APS -extension of (\mathbb{G}, σ)
 $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$, $L : \mathbb{E} \rightarrow \mathbb{N}$

$$\forall n \geq L(t_i) : \\ \text{ev}(t_i, n) = T_i(n) \in \Sigma\Pi(\mathbb{G})$$

$W = \{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$ is sum-product reduced and
 shift stable: sums/products in T_i are from $\{T_1, \dots, T_{i-1}\}$.

In particular, if $f \in \mathbb{E} \setminus \{0\}$, then we can take the "unique"
 $0 \neq F \in \text{SumProd}(\{T_1, \dots, T_e\}, \mathbb{G})$ with $F(n) = \text{ev}(f, n)$ for all $n \geq L(f)$.

Definition

For $f \in \mathbb{E}$ we also write $\text{expr}(f) = F$ for this particular F .

Connection between $\text{SumProd}(\mathbb{G})$ and hypergeometric APS -extension

• **Observation 1:** Given $\{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$, one can construct a hypergeometric APS -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with ev and L such that there are $a_1, \dots, a_e \in \mathbb{E}$ and $\delta_1, \dots, \delta_e$ with $\text{ev}(a_i, n) = T_i(n)$.

• **Observation 2:**

(\mathbb{E}, σ) with $\mathbb{E} = \mathbb{G}\langle t_1 \rangle \dots \langle t_e \rangle$ a hypergeometric APS -extension of (\mathbb{G}, σ)
 $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$, $L : \mathbb{E} \rightarrow \mathbb{N}$

$$\forall n \geq L(t_i) : \\ \text{ev}(t_i, n) = T_i(n) \in \Sigma\Pi(\mathbb{G})$$

$W = \{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$ is sum-product reduced and
 shift stable: sums/products in T_i are from $\{T_1, \dots, T_{i-1}\}$.

Example

For $f = x + \frac{x+1}{x}s^4 \in \mathbb{Q}(x)[s]$ we obtain

$$\text{expr}(f) = F = x \oplus \left(\frac{x+1}{x}\right) \odot (\text{Sum}(1, \frac{1}{x})^{\wedge} 4) \in \text{Sum}(\mathbb{Q}(x))$$

with $F(n) = \text{ev}(f, n)$ for all $n \geq 1$.

Connection between $\text{SumProd}(\mathbb{G})$ and hypergeometric APS -extension

• **Observation 1:** Given $\{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$, one can construct a hypergeometric APS -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with ev and L such that there are $a_1, \dots, a_e \in \mathbb{E}$ and $\delta_1, \dots, \delta_e$ with $\text{ev}(a_i, n) = T_i(n)$.

• **Observation 2:**

(\mathbb{E}, σ) with $\mathbb{E} = \mathbb{G}\langle t_1 \rangle \dots \langle t_e \rangle$ a hypergeometric APS -extension of (\mathbb{G}, σ)
 $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$, $L : \mathbb{E} \rightarrow \mathbb{N}$

$$\forall n \geq L(t_i) : \\ \text{ev}(t_i, n) = T_i(n) \in \Sigma\Pi(\mathbb{G})$$

$W = \{T_1, \dots, T_e\} \subseteq \Sigma\Pi(\mathbb{G})$ is sum-product reduced and
shift stable: sums/products in T_i are from $\{T_1, \dots, T_{i-1}\}$.

Difference ring theory in action

Let (\mathbb{E}, σ) be a hypergeometric *APS*-extension of (\mathbb{G}, σ) with $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$ and let $\tau : \mathbb{E} \rightarrow \mathbb{K}^{\mathbb{N}} / \sim$ be the \mathbb{K} -homomorphism given by

$$\tau(f) = (\text{ev}(f, n))_{n \geq 0}.$$

Difference ring theory in action

Let (\mathbb{E}, σ) be a hypergeometric *APS*-extension of (\mathbb{G}, σ) with $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$ and let $\tau : \mathbb{E} \rightarrow \mathbb{K}^{\mathbb{N}} / \sim$ be the \mathbb{K} -homomorphism given by

$$\tau(f) = (\text{ev}(f, n))_{n \geq 0}.$$

Lemma

Let $W = \{T_1, \dots, T_e\} \in \Sigma\Pi(\mathbb{G})$ with $T_i = \text{expr}(t_i)$. Then:

W is canonical reduced \Leftrightarrow τ is injective.

Difference ring theory in action

Let (\mathbb{E}, σ) be a hypergeometric APS-extension of (\mathbb{G}, σ) with $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$ and let $\tau : \mathbb{E} \rightarrow \mathbb{K}^{\mathbb{N}} / \sim$ be the \mathbb{K} -homomorphism given by

$$\tau(f) = (\text{ev}(f, n))_{n \geq 0}.$$

Lemma

Let $W = \{T_1, \dots, T_e\} \in \Sigma\Pi(\mathbb{G})$ with $T_i = \text{expr}(t_i)$. Then:

$$W \text{ is canonical reduced} \quad \Leftrightarrow \quad \tau \text{ is injective.}$$

Using difference ring theory we get the following crucial property:

Theorem

$$\tau \text{ is injective} \quad \Leftrightarrow \quad \text{const}_{\sigma}\mathbb{E} = \mathbb{K}.$$

Example

For our difference field $\mathbb{G} = \mathbb{K}(x)$ with $\sigma(x) = x + 1$ and $\text{const}_\sigma \mathbb{K} = \mathbb{K}$ we have $\text{const}_\sigma \mathbb{K}(x) = \mathbb{K}$.

Example

For our difference field $\mathbb{G} = \mathbb{K}(x)$ with $\sigma(x) = x + 1$ and $\text{const}_\sigma \mathbb{K} = \mathbb{K}$ we have $\text{const}_\sigma \mathbb{K}(x) = \mathbb{K}$.

Definition

A hypergeometric *APS*-extension (\mathbb{E}, σ) of (\mathbb{G}, σ) is called **hypergeometric $R\Pi\Sigma$ -extension** if

$$\text{const}_\sigma \mathbb{E} = \mathbb{K}.$$

Example

For our difference field $\mathbb{G} = \mathbb{K}(x)$ with $\sigma(x) = x + 1$ and $\text{const}_\sigma \mathbb{K} = \mathbb{K}$ we have $\text{const}_\sigma \mathbb{K}(x) = \mathbb{K}$.

Definition

A hypergeometric *APS*-extension (\mathbb{E}, σ) of (\mathbb{G}, σ) is called **hypergeometric $R\Pi\Sigma$ -extension** if

$$\text{const}_\sigma \mathbb{E} = \mathbb{K}.$$

Theorem

Let $W = \{T_1, \dots, T_e\} \subset \Sigma\Pi(\mathbb{G})$ be in sum-product reduced representation and shift-stable, i.e., for each $1 \leq i \leq e$ the arising sums and products in T_i are contained in $\{T_1, \dots, T_{i-1}\}$. Then the following is equivalent:

1. There is a hypergeometric $R\Pi\Sigma$ -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with $\mathbb{E} = \mathbb{G}\langle t_1 \rangle \dots \langle t_e \rangle$ equipped with an evaluation function ev with $T_i = \text{expr}(t_i) \in \Sigma\Pi(\mathbb{G})$ for $1 \leq i \leq e$.
2. W is σ -reduced over \mathbb{G} .

This yields a strategy (actually the only strategy for shift-stable sets).

A Strategy to solve Problem SigmaReduce

Given: $A_1, \dots, A_u \in \text{SumProd}(\mathbb{G})$ with $\mathbb{G} = \mathbb{K}(x)$.

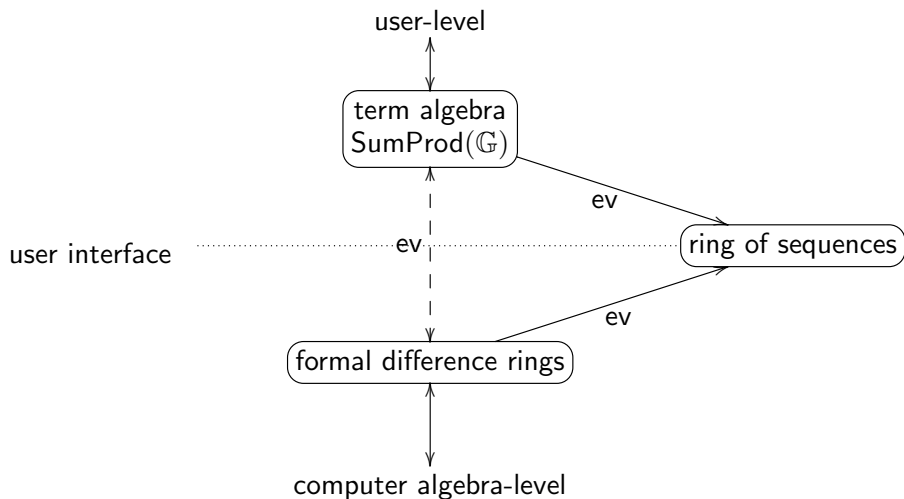

Find: a σ -reduced set $W = \{T_1, \dots, T_e\} \subset \Sigma\Pi(\mathbb{G})$ with $B_1, \dots, B_u \in \text{SumProd}(W, \mathbb{G})$ and $\delta_1, \dots, \delta_u \in \mathbb{N}$ such that $A_i(n) = B_i(n)$ holds for all $n \geq \delta_i$ and $1 \leq i \leq r$.

1. Construct $R\Pi\Sigma$ -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with $\mathbb{E} = \mathbb{G}\langle t_1 \rangle \dots \langle t_e \rangle$ equipped with $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$ such that we get $a_1, \dots, a_u \in \mathbb{E}$ and $\delta_1, \dots, \delta_u \in \mathbb{N}$ with

$$A_i(n) = \text{ev}(a_i, n) \quad \forall n \geq \delta_i. \quad (12)$$

2. Set $W = \{T_1, \dots, T_e\}$ with $T_i := \text{expr}(t_i) \in \Sigma\Pi(\mathbb{G})$ for $1 \leq i \leq e$.
3. Set $B_i := \text{expr}(a_i) \in \text{SumProd}(W, \mathbb{G})$ for $1 \leq i \leq u$.
4. Return $W, (B_1, \dots, B_u)$ and $(\delta_1, \dots, \delta_u)$.

- ▶ $\sigma(z) = \gamma z$ and $z^\lambda = 1$ for some primitive λ th root of unity $\gamma \in \mathbb{K}^*$
- ▶ $\text{const}_\sigma \mathbb{E} = \mathbb{K}$

such that for $1 \leq i \leq r$ there are $g_i \in \mathbb{E}^*$ with

$$\sigma(g_i) = \alpha_i g_i$$

Note: There are similar results for the q -rational, multi-basic and mixed case

A hypergeometric **RHS-extension** of $(\mathbb{K}(x), \sigma)$ is

► a ring

$$\mathbb{A} := \mathbb{K}(x)[p_1, p_1^{-1}][p_2, p_2^{-1}] \cdots [p_e, p_e^{-1}][z][s_1][s_2][s_3] \cdots$$

► with an automorphism where $\sigma(c) = c$ for all $c \in \mathbb{K}$ and where

$$\sigma(x) = x + 1$$

$$\begin{array}{ll} \text{hypergeometric} & \Leftrightarrow \sigma(p_1) = a_1 p_1 \quad a_1 \in \mathbb{K}(x)^* \\ \text{products} & \sigma(p_2) = a_2 p_2 \quad a_2 \in \mathbb{K}(x)^* \\ & \vdots \end{array}$$

$$\sigma(p_e) = a_e p_e \quad a_e \in \mathbb{K}(x)^*$$

$$\begin{array}{ll} \gamma \text{ is a primitive } \lambda\text{th} & \gamma^{\mathbf{k}} \\ \text{root of unity} & \Leftrightarrow \sigma(\mathbf{z}) = \gamma \mathbf{z} \quad \mathbf{z}^\lambda = \mathbf{1} \end{array}$$

$$\begin{array}{ll} \text{(nested) sum} & \Leftrightarrow \begin{array}{ll} \sigma(s_1) = s_1 + f_1 & f_1 \in \mathbb{K}(x)[p_1, p_1^{-1}] \cdots [p_e, p_e^{-1}][z] \\ \sigma(s_2) = s_2 + f_2 & f_2 \in \mathbb{K}(x)[p_1, p_1^{-1}] \cdots [p_e, p_e^{-1}][z][s_1] \\ \sigma(s_3) = s_3 + f_3 & f_3 \in \mathbb{K}(x)[p_1, p_1^{-1}] \cdots [p_e, p_e^{-1}][z][s_1][s_2] \\ & \vdots \end{array} \end{array}$$

such that $\text{const}_\sigma \mathbb{E} = \mathbb{K}$

This yields a strategy (actually the only strategy for shift-stable sets).

A Strategy to solve Problem SigmaReduce

Given: $A_1, \dots, A_u \in \text{SumProd}(\mathbb{G})$ with $\mathbb{G} = \mathbb{K}(x)$.

Find: a σ -reduced set $W = \{T_1, \dots, T_e\} \subset \Sigma\Pi(\mathbb{G})$ with $B_1, \dots, B_u \in \text{SumProd}(W, \mathbb{G})$ and $\delta_1, \dots, \delta_u \in \mathbb{N}$ such that $A_i(n) = B_i(n)$ holds for all $n \geq \delta_i$ and $1 \leq i \leq r$.

1. Construct $R\Pi\Sigma$ -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with $\mathbb{E} = \mathbb{G}\langle t_1 \rangle \dots \langle t_e \rangle$ equipped with $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$ such that we get $a_1, \dots, a_u \in \mathbb{E}$ and $\delta_1, \dots, \delta_u \in \mathbb{N}$ with

$$A_i(n) = \text{ev}(a_i, n) \quad \forall n \geq \delta_i. \quad (12)$$

2. Set $W = \{T_1, \dots, T_e\}$ with $T_i := \text{expr}(t_i) \in \Sigma\Pi(\mathbb{G})$ for $1 \leq i \leq e$.
3. Set $B_i := \text{expr}(a_i) \in \text{SumProd}(W, \mathbb{G})$ for $1 \leq i \leq u$.
4. Return $W, (B_1, \dots, B_u)$ and $(\delta_1, \dots, \delta_u)$.

This yields a strategy (actually the only strategy for shift-stable sets).

An Algorithm to solve Problem SigmaReduce

Given: $A_1, \dots, A_u \in \text{SumProd}(\mathbb{G})$ with $\mathbb{G} = \mathbb{K}(x)$.

Find: a σ -reduced set $W = \{T_1, \dots, T_e\} \subset \Sigma\Pi(\mathbb{G})$ with $B_1, \dots, B_u \in \text{SumProd}(W, \mathbb{G})$ and $\delta_1, \dots, \delta_u \in \mathbb{N}$ such that $A_i(n) = B_i(n)$ holds for all $n \geq \delta_i$ and $1 \leq i \leq r$.

1. Construct $R\Pi\Sigma$ -extension (\mathbb{E}, σ) of (\mathbb{G}, σ) with $\mathbb{E} = \mathbb{G}\langle t_1 \rangle \dots \langle t_e \rangle$ equipped with $\text{ev} : \mathbb{E} \times \mathbb{N} \rightarrow \mathbb{K}$ such that we get $a_1, \dots, a_u \in \mathbb{E}$ and $\delta_1, \dots, \delta_u \in \mathbb{N}$ with

$$A_i(n) = \text{ev}(a_i, n) \quad \forall n \geq \delta_i. \quad (12)$$

2. Set $W = \{T_1, \dots, T_e\}$ with $T_i := \text{expr}(t_i) \in \Sigma\Pi(\mathbb{G})$ for $1 \leq i \leq e$.
3. Set $B_i := \text{expr}(a_i) \in \text{SumProd}(W, \mathbb{G})$ for $1 \leq i \leq u$.
4. Return $W, (B_1, \dots, B_u)$ and $(\delta_1, \dots, \delta_u)$.

Telescoping

GIVEN $f(k) = S_1(k)$.

FIND $g(k)$:

$$f(k) = g(k+1) - g(k)$$

for all $1 \leq k \leq n$ and $n \geq 0$.

Telescoping

GIVEN $f(k) = S_1(k)$.

FIND $g(k)$:

$$f(k) = g(k+1) - g(k)$$

for all $1 \leq k \leq n$ and $n \geq 0$.

Sigma computes

$$g(k) = (S_1(k) - 1)k.$$

Telescoping

GIVEN $f(k) = S_1(k)$.

FIND $g(k)$:

$$f(k) = g(k+1) - g(k)$$

for all $1 \leq k \leq n$ and $n \geq 0$.

Summing this equation over k from 1 to n gives

$$\begin{aligned} \sum_{k=1}^n S_1(k) &= g(n+1) - g(1) \\ &= (S_1(n+1) - 1)(n+1). \end{aligned}$$

Telescoping in the given difference ring

FIND a closed form for

$$\sum_{k=1}^n S_1(k).$$

A difference ring for the summand

Consider a ring

$$\mathbb{A}$$

with the automorphism $\sigma : \mathbb{A} \rightarrow \mathbb{A}$ defined by

Telescoping in the given difference ring

FIND a closed form for

$$\sum_{k=1}^n S_1(k).$$

A difference ring for the **summand**

Consider a ring

$$\mathbb{A} := \mathbb{Q}$$

with the automorphism $\sigma : \mathbb{A} \rightarrow \mathbb{A}$ defined by

$$\sigma(c) = c \quad \forall c \in \mathbb{Q},$$

Telescoping in the given difference ring

FIND a closed form for

$$\sum_{k=1}^n S_1(k).$$

A difference ring for the summand

Consider a ring

$$\mathbb{A} := \mathbb{Q}(x)$$

with the automorphism $\sigma : \mathbb{A} \rightarrow \mathbb{A}$ defined by

$$\sigma(c) = c \quad \forall c \in \mathbb{Q},$$

$$\sigma(x) = x + 1,$$

$$S k = k + 1,$$

Telescoping in the given difference ring

FIND a closed form for

$$\sum_{k=1}^n S_1(k).$$

A difference ring for the **summand**

Consider a ring

$$\mathbb{A} := \mathbb{Q}(x)[h]$$

with the automorphism $\sigma : \mathbb{A} \rightarrow \mathbb{A}$ defined by

$$\sigma(c) = c \quad \forall c \in \mathbb{Q},$$

$$\sigma(x) = x + 1,$$

$$\sigma(h) = h + \frac{1}{x+1},$$

$$\mathcal{S} k = k + 1,$$

$$\mathcal{S} S_1(k) = S_1(k) + \frac{1}{k+1}.$$

Telescoping in the given difference ring

FIND $g \in \mathbb{A}$:

$$\sigma(g) - g = h.$$

Telescoping in the given difference ring

FIND $g \in \mathbb{A}$:

$$\sigma(g) - g = h.$$

We compute

$$g = (h - 1)x \in \mathbb{A}.$$

Telescoping in the given difference ring

FIND $g \in \mathbb{A}$:

$$\sigma(g) - g = h.$$

We compute

$$g = (h - 1)x \in \mathbb{A}.$$

This gives

$$g(k+1) - g(k) = S_1(k)$$

with

$$g(k) = (S_1(k) - 1)k.$$

Telescoping in the given difference ring

FIND $g \in \mathbb{A}$:

$$\sigma(g) - g = h.$$

We compute

$$g = (h - 1)x \in \mathbb{A}.$$

This gives

$$g(k+1) - g(k) = S_1(k)$$

with

$$g(k) = (S_1(k) - 1)k.$$

Hence,

$$(S_1(n+1) - 1)(n+1) = \sum_{k=1}^n S_1(k).$$

FIND $g \in \mathbb{Q}(x)[h]$:

$$\sigma(g) - g = h.$$

FIND $g \in \mathbb{Q}(x)[h]$:

$$\sigma(g) - g = h.$$

Degree bound: COMPUTE $b \geq 0$:

Telescoping in the given difference ring

FIND $g \in \mathbb{A}$:

$$\sigma(g) - g = h.$$

We compute

$$g = (h - 1)x \in \mathbb{A}.$$

This gives

$$g(k+1) - g(k) = S_1(k)$$

with

$$g(k) = (S_1(k) - 1)k.$$

Hence,

$$(S_1(n+1) - 1)(n+1) = \sum_{k=1}^n S_1(k).$$

Remarks. All results can be generalized to the following setting:

- the **mixed multibasic hypergeometric case**:

$\mathbb{G} := \mathbb{K}(x, x_1, \dots, x_v)$ with $\mathbb{K} = K(q_1, \dots, q_v)$ For $f = \frac{p}{q} \in \mathbb{G}$ with $p, q \in \mathbb{K}[x, x_1, \dots, x_v]$ where $q \neq 0$ and p, q being coprime we define

$$\text{ev}(f, k) = \begin{cases} 0 & \text{if } q(k, q_1^k, \dots, q_v^k) = 0 \\ \frac{p(k, q_1^k, \dots, q_v^k)}{q(k, q_1^k, \dots, q_v^k)} & \text{if } q(k, q_1^k, \dots, q_v^k) \neq 0. \end{cases}$$

Remarks. All results can be generalized to the following setting:

1. Creative telescoping (for the special case of hypergeometric terms see Zeilberger's algorithm (1991))

GIVEN a definite sum

$$A(n) = \sum_{k=0}^n f(n, k);$$

$f(n, k)$: indefinite nested product-sum in k ;
 n : extra parameter

FIND a recurrence for $A(n)$

1. Creative telescoping (for the special case of hypergeometric terms see Zeilberger's algorithm (1991))

GIVEN a **definite** sum

$$A(n) = \sum_{k=0}^n f(n, k);$$

$f(n, k)$: indefinite nested product-sum in k ;
 n : extra parameter

FIND a **recurrence** for $A(n)$

2. Recurrence solving

GIVEN a recurrence

$a_0(n), \dots, a_d(n), h(n)$:
indefinite nested product-sum expressions.

$$a_0(n)A(n) + \dots + a_d(n)A(n+d) = h(n);$$

FIND **all solutions** expressible by indefinite nested products/sums

(Abramov/Bronstein/Petkovšek/CS, in preparation)

1. Creative telescoping (for the special case of hypergeometric terms see Zeilberger's algorithm (1991))

GIVEN a definite sum

$$A(n) = \sum_{k=0}^n f(n, k);$$

$f(n, k)$: indefinite nested product-sum in k ;
 n : extra parameter

FIND a recurrence for $A(n)$

2. Recurrence solving

GIVEN a recurrence

$a_0(n), \dots, a_d(n), h(n)$:
 indefinite nested product-sum expressions.

$$a_0(n)A(n) + \dots + a_d(n)A(n+d) = h(n);$$

FIND all solutions expressible by indefinite nested products/sums

(Abramov/Bronstein/Petkovšek/CS, in preparation)

3. Find a “closed form”

$A(n)$ =combined solutions in terms of indefinite nested sums.
